

# The Children's Aid Society of Haldimand and Norfolk Annual Review for 2015/16

### Introduction

This document summarizes the 2015-16 Annual Review for The Children's Aid Society of Haldimand and Norfolk. It highlights the strategic priorities, key activities and accomplishments, and performance indicators of the organization for the past year for services in the communities of Haldimand and Norfolk.

## Key Activities supporting Strategic Directions

A summary of the Service Plan Goals and the accomplishments for 2015-16 is provided in the Service Plan document. (See 2015-16 Service Plan Accomplishments & 2017-18 Key Activities posted under Accountability – Public Accountability tab.)

### Analysis of Operational Performance

A discussion of the 2015-16 operations is provided in the Society's 2015/16 Annual Report. (See 2015-16 Annual Report posted under Accountability – Public Accountability tab.)

### Performance Measurement

Children's Aid Societies understand the importance of measuring performance and outcomes for children and their families. To this end we have developed key Performance Indicators (PIs) that best outline effectiveness in delivering the child protection mandate.

There are currently five Performance Indicators (PIs) that are reported:

- Recurrence of Child Protection Concerns in a Family after an Investigation
- Recurrence of Child Protection Concerns in a Family after Ongoing Services were Provided
- · Days of care by placement type
- Time to permanency
- Quality of the caregiver-youth relationship

Each of these Performance Indicators is described in more detail below and posted in more detail under the Accountability – Performance Indicators tab on the public website.

# Safety Outcome - Recurrence of Child Protection Concerns in a Family after an Investigation

This PI measures the percentage of family cases closed at investigation in a fiscal year that were re-investigated within 12 months after closing and where the child protection concerns were verified.

This measure is important because closing a case following an investigation assessment suggests that there are no child protection concerns requiring ongoing Children's Aid Society involvement. However, at the conclusion of many investigations, workers make referrals to community-based services for families. This measure is important for further understanding of those families that return to a Children's Aid Society with verified protection concerns and those that do not, both in terms of the nature and intensity of the services offered, and the risks, strengths and needs of children and families. Increasing knowledge in these areas will inform decision-making and improve service delivery.

There is no agreed-upon benchmark for the "acceptable" level of recurrence. While a lower level is generally desirable, the rate of recurrence is unlikely ever to be 0% for a variety of reasons, including the chronic nature of many of the struggles experienced by families commonly known to the child welfare system, e.g., poverty, substance abuse and mental health problems. Furthermore, the reconnection of some families with the child welfare system can be in and of itself a protective factor to children whose families are connected with necessary supports. (See page 1 of "Our results 2010-2014" document found under the Accountability - Performance Indicators tab.)

# Safety Outcome - Recurrence of Child Protection Concerns in a Family after Ongoing Protection Services Were Provided

This PI measures the percentage of family cases closed at ongoing protection in a fiscal year that were re-investigated within 12 months after closing where the child protection concerns were verified.

This measure is important because closing a case following ongoing services suggests that child protection concerns have been addressed and no longer require ongoing Children's Aid Society involvement. However, at the conclusion of Children's Aid involvement, many families continue to receive supportive services from other agencies in the community. This indicator measures the extent to which services have been successful in reducing risk to children over the 12 month period following Children's Aid Society involvement. This measure is important for further understanding of those families that return to a Children's Aid Society with verified protection concerns and those that do not, both in terms of the nature and intensity of the services offered, and the risks, strengths and needs of children and families. Increasing knowledge in these areas supports improvements in decision-making and service delivery.

There is no agreed-upon benchmark for the "acceptable" level of recurrence. While a lower level is generally desirable, the rate of recurrence is unlikely ever to be 0% for a variety of reasons, including the chronic nature of many of the struggles experienced by families commonly known to the child welfare system, e.g., poverty, substance abuse and mental health problems. Furthermore, the reconnection of some families with the child welfare system can be in and of itself a protective factor to children whose families are connected with necessary supports. (See page 2 of "Our results 2010-2014" document posted under the Accountability – Performance Indicators tab.)

### Permanency Outcome - Days of Care, by Placement Type

This PI measures, for all children admitted to the care of a Children's Aid Society, the days of care provided in the fiscal year, by placement type.

We know that children placed in family-based care are more likely to achieve permanency when the exit care, i.e., be discharged to parents or family including adoptive families or legal custody arrangements, compared to children in group care. Family-based care is the preferred placement setting for the majority of children in care. Children placed in family settings have greater opportunities to form a connection with consistent caregivers and to experience the benefits associated with membership in a family.

While a high rate of family-based care is desirable, selection of a placement setting should be first and foremost influenced by the needs of the child and the fit to the placement. Given the mandate of a Children's Aid Society, and the nature of the challenges experienced

by some children and youth, it is likely that there will always be some young people in care who require specialized treatment, programs and structure associated with group care settings. (See page 3 of "Our results 2010-2014" document posted under the Accountability – Performance Indicators tab.)

### **Permanency Outcome – Time to Permanency**

This PI measures, for all children admitted to the care of a CAS during the fiscal year, the cumulative percentage discharged within a specific time period (i.e. 12 months, 24 months and 36 months since admission).

One of the mission-critical outcomes in child welfare is to facilitate permanent living arrangements for all children that are safe, stable and supportive of lifetime relationships. The child welfare system in Ontario has multiple options through which permanency can be achieved (e.g., reunification with parents, legal custody, and adoption). Permanency planning is a significant focus for children in care, whose permanency status, both legally and psychologically, is uncertain. The timing and nature of permanency may look different for every child depending on the child's needs, family circumstances, court processes, and availability of community service providers.

A key factor that influences time to permanency is child age at admission. Children who enter care at a young age are more likely to be discharged to certain types of permanency (e.g., adoption) compared to older children. Young children often achieve permanency within shorter timeframes, supported by legislation that limits the allowable cumulative time in short-term care for children under 6 years of age compared to older children. An additional factor that impacts time to permanency is the needs of the child, with more complex needs associated with longer timeframes to achieving permanency. (See page 4 of "Our results 2010-2014" document posted under the Accountability – Performance Indicators tab.)

# Well-being Outcome - Quality of the Caregiver and Youth Relationship

This PI measures the average score for children in care (aged 10-17) from a standard scale that measures a young person's perception of the quality of the relationship with his or her primary caregiver. The scale measures the following four items:

- 1. How well do you feel he/she understands you?
- 2. How much fairness do you receive from him/her?
- 3. How much affection do you receive from him/her?
- 4. Overall, how would you describe your relationship with him/her?

Each of these four items is rated from 0 to 2, yielding a composite score with a minimum of 0 and a maximum of 8.

This indicator is important because the quality of the caregiver-youth relationship is at the heart of service to children in care. Research demonstrates that a young person's perception of the quality of his/her relationship with his/her caregiver predicts the following: current happiness; self-esteem; positive behaviour; and placement satisfaction. As scores increase on the quality of the caregiver relationship scale, so do positive outcomes across each of these areas (e.g. higher self-esteem).

The key influencing factor is the young person's perception that the caregiver understands, treats fairly, shows affection towards, and has a close relationship with him/her. (See page 5 of "Our results 2010-2014" document posted under the Accountability – Performance Indicators tab.)

#### **Audited Financial Statements**

The Audited Financial Statements can be found by clicking the attached link. (See 2015-16 Audited Financial Statements posted under Accountability – Public Accountability tab.)
